

Airport™ Security “Low Divider Set”

The *Airport Security* holds both *Artificial Intelligence 15* & *17* laptop cases in the outside stretch pocket.

The *Airport Security Low Divider Set* allows up to a 17" or smaller laptop to fit inside the bag! The low dividers leave enough room for the laptop to fit with an *Artificial Intelligence 15* or *17* laptop case.

To insert the *Airport Security Low Divider Set*, first remove all original dividers from the bag except the top dividers, as shown above.

Arrange low dividers as desired to work with your equipment. Please note that lenses up to a 300 2.8 (without hood) will fit beneath the laptop case.

After making sure that your equipment does not extend above the dividers, place your laptop directly on top of the low dividers. We suggest keeping the laptop inside an *Artificial Intelligence 15* or *17* for added protection.

Think Tank Photo's *Cable Management 50* bag may also be placed on top of the low dividers.

WARNING: *This roller is not designed to be checked luggage when traveling by airline. It is designed to stay with you at all times. If for some reason you are forced to check it, remove your laptop case and your SLR camera bodies and hand carry them onto the plane. Checking your gear with the laptop enclosed may permanently damage your equipment.*
